My main goal is to be able to program a front end website using React, JavaScript, CSS, Firebase and to know how to use Github and Git by running multiple git command lines.

For that, I decided to create a blog site which requires a lot of work to project me in the real world of many influencers or youtubers who have chains of youtube or instagram and they do not manage to create their own site. Personally, I find that this project is a difficult project for this semester.

Regarding the Github part, here is the link to access my project:

<https://github.com/AGUIRI/CPSC222-Project4-RayyaneAguiri.git>

Here is a table that summarizes everything that is done:

Commits	Reason	Date
Commit 1	Initialize project using Create React App	04/28/2020
Commit 2	First Commit install Firebase	04/28/2020
Commit 3	Add project 3	04/29/2020
Commit 4	resolve problem with project 3	04/29/2020
Commit 5 +6	Add journal and add component	04/29/2020

In addition, I have not encountered any difficulty with the git commands.

I found difficulties regarding the API/JSON and the 2 forms, and sometimes with React.

In conclusion, I am satisfied with my project because in this step, I can see that the programming of a website is getting better and better as because on the other hand

to enrich my knowledge in React & JS & CSS...In this project, I made more than 10 components 9 in folder"component" and 2 in App.js

and 4 containers , and each component and container has one index.js and one style.css.

The thing I wanted to do but unfortunately and i know how to do it is:the API and Include one image that changes depending on some state's value , because i don't have time to do it ((I work as math tutor)online tutoring 6 hours per day, online classes, a lot of projects in other classes, everyday i have about 2 or 3 homeworks), but i'm gonna wait you Sir to grade this project and then, i'm gonna continue working on this project . My purpose in his class:is to improve my level in Server Side programming, because it's my future. So yes, i'm very sad about this project, but i don't have solution, i must submit it.

Well, it's not the end of the world, but what to say, thank you for your time to always reply to my emails, and also to explain the lessons well, this class really attracted me because it has a strong content.
